Getting Started

Navigation, layout, and document status overview

System Overview & Navigation

The Accounting System is accessed through your web browser. After logging in, the navigation menu gives you access to every module. The main sections are:

Menu Item	What You Can Do There
Dashboard	See your financial overview — revenue, expenses, unpaid invoices, and overdue bills at a glance
Invoices	Create and manage customer invoices; record payments received
Bills	Record and pay vendor bills (supplier invoices)
Expenses	Log company spending such as office costs, travel, or utilities
Customers	Manage your customer list and view each customer's full payment ledger
Vendors	Manage your vendor/supplier list and view each vendor's ledger
Budgets	Create spending plans and compare them to actual figures
Financial Reports	Generate Trial Balance, Balance Sheet, Income Statement, and Cash Flow reports
General Ledger	See every transaction posted to any account
Journal Entries	<i>(Accountants only)</i> Create custom double-entry transactions
Chart of Accounts	<i>(Accountants only)</i> Manage the list of financial accounts
Period Close	<i>(Accountants only)</i> Lock a completed month so no further changes are allowed

NAVIGATION TIP

Every page has a **breadcrumb** at the top showing where you are, and a **Back** button to return to the list. The page title area also shows quick-action buttons such as **New Invoice** or **New Entry**.

Understanding Document Statuses

Every invoice, bill, and expense has a coloured status badge that tells you where it is in its lifecycle.

Invoice & Bill Statuses

Status	What It Means	What You Can Do Next
Draft	Created but not yet sent to the ledger. No accounting impact yet.	Edit the document, then click Post (invoices) or Approve (bills)
Sent	Invoice has been sent to the customer but not yet formally posted.	Post the invoice to record it in the accounting ledger
Issued	Posted to the ledger. Customer owes the full amount.	Record a payment when money is received
Partially Settled	Some payment has been received; an outstanding balance remains.	Record additional payments until fully settled
Settled	Fully paid. Balance is zero.	No further action needed
Overdue	Past the due date with an unpaid balance.	Record a payment or follow up with the customer/vendor
Void	Cancelled. Excluded from all reports.	Create a new document if needed

Expense Statuses

Status	What It Means
Draft	Not yet posted to accounting. Click Post to record it.
Approved	Posted as a credit (to be paid later). Click Pay when you settle it.
Partial	Partially paid.
Paid	Fully paid. Cash was paid immediately when posted.

Journal Entry Statuses

Status	What It Means
Draft	Being prepared. Not yet in the ledger.
Pending Approval	Submitted for review by a senior accountant.
Posted	Finalised and recorded in the General Ledger. Affects all reports.
Void	Cancelled.

IMPORTANT

Only **posted** transactions affect your financial reports and account balances. A draft invoice or expense has no impact until it is posted or approved.

2

Dashboard

Your financial overview at a glance

Accounting → Dashboard

The Dashboard is the first page you see when you open the Accounting System. It gives you an instant snapshot of your business finances for any time period you choose.

Date Range Selector

In the top-right corner of the dashboard, use the dropdown to change the reporting period:

Option	Shows figures for...
Today	Transactions created today only
This Week	Monday to today
This Month	1st of the current month to today
This Quarter	Start of the current quarter to today
This Year	January 1st to today

Key Performance Indicators (KPIs)

The large stat cards across the top show the most important numbers for the selected period:

REVENUE

↑

EXPENSES

↓

RECEIVABLES

AR

PAYABLES

AP

KPI Card	What It Shows
Revenue	Total sales income posted in the period
Expenses	Total costs and expenses posted in the period
Receivables (AR)	Total outstanding balance owed to you by customers
Payables (AP)	Total outstanding balance you owe to vendors
Net Income	Revenue minus Expenses — your profit/loss
Cash Balance	Current balance in your cash and bank accounts

Quick Action Buttons

The top-right action area has shortcuts to the most common tasks:

- **New Invoice** — Jump straight to creating a new customer invoice
- **New Entry** — Create a manual journal entry (accountants)
- **Ledger** — Open the General Ledger

Charts and Activity

Below the KPI cards you will see bar or line charts showing revenue and expense trends over the selected period, plus a recent activity list of the latest invoices and bills requiring your attention.

TIP

Overdue invoices (highlighted in **red** on the due date column) appear prominently on the dashboard so you can take action quickly.

3

Customers

Managing your customer list and viewing customer ledgers

Accounting → Customers

The Customers page lists all customers in the system. You can search by name or email, and see a summary of each customer's outstanding balance.

Adding a New Customer

- 1

Click

New Customer

in the top-right corner.
- 2

Fill in the customer details

using the form fields below.
- 3

Click

Save

to create the customer.

CUSTOMER FORM FIELDS	
Name *	Full name or company name of the customer
Email	Customer's email address (used for contact and reference)
Phone	Customer's contact number
Address	Billing address
Currency	The currency this customer is invoiced in (e.g. BDT, USD)

Viewing a Customer's Ledger

Click

View Ledger

 next to any customer to see their complete transaction history — every invoice, payment, charge, and discount — along with the running outstanding balance.

NOTE

The customer ledger shows the **net balance** at each point in time. Use it to answer questions like "how much does this customer owe right now?" or "when did they last pay?"

4

Vendors

Managing your supplier list and viewing vendor ledgers

Accounting → Vendors

Vendors (also called suppliers) are companies or individuals that you purchase goods or services from. Their bills appear in the Bills section.

Adding a New Vendor

- 1 Click **New Vendor** in the top-right corner.
- 2 Fill in the vendor details — name, email, phone, and address.
- 3 Click **Save**.

Viewing a Vendor's Ledger

Click **View Ledger** next to any vendor to see all bills, payments, freight charges, and discounts recorded for that vendor, along with your outstanding balance.

5

Invoices

Creating customer invoices, posting them, and recording payments

Accounting → Invoices

Invoice Lifecycle

Finding Invoices

The invoice list shows all invoices with filters at the top:

- **Search box** — type an invoice number or customer name to narrow the list
- **Status filter** — show only Draft, Sent, Partial, Paid, Overdue, or Void invoices
- **Date range** — filter by invoice date using From and To date pickers

The list shows each invoice's number, customer, dates, total amount, remaining balance, and current status. Overdue due dates appear in **red**.

Creating a New Invoice

1 Click **New Invoice**

— a form panel slides open.

2 **Select a Customer**

from the dropdown. If the customer does not appear, add them in the Customers section first.

3 **Set the Invoice Date and Due Date.**

The due date is when payment is expected.

4 **Set the Currency**

(e.g. BDT). Leave as default if your customer pays in the base currency.

5 **Add line items.**

Click **Add Item** for each product or service. Fill in Description, Quantity, Unit Price, and Tax %.

6 **Review the totals**

— Subtotal, Tax, and Total are calculated automatically.

7 **Add Notes**

(optional) — any extra information for the customer.

8 Click **Create Invoice**

. The invoice is saved with status **Draft**.

INVOICE FORM FIELDS	
Customer *	The customer being invoiced. Must exist in the Customers list.
Currency	Currency for this invoice (e.g. BDT, USD). Defaults to base currency.
Invoice Date *	The date the invoice is issued. Usually today's date.
Due Date *	The deadline for payment. The system will mark the invoice Overdue after this date.
Line Items	Each row is one product or service: Description, Quantity, Unit Price, Tax %.
Notes	Optional internal or customer-facing notes.

Posting an Invoice to the Ledger

Creating an invoice saves it as a Draft. To record it in the accounting ledger (so it affects your AR balance and reports), you must **post** it.

1 Find the invoice

in the list. It will show **Draft** status.

2 Click **Post**

in the Actions column. A confirmation prompt appears.

3 Confirm.

The invoice status changes to **Issued** and a journal entry is automatically created: the customer's Accounts Receivable increases by the invoice total.

BEFORE YOU POST

Double-check all amounts and the customer name. Once posted, the invoice amounts cannot be edited. If you made a mistake, void the invoice and create a new one.

Recording a Customer Payment

When a customer pays their invoice (or part of it), record the payment here.

1 Find the invoice

— it should have status **Issued**, **Partial**, or **Overdue**.

2 Click **Record Payment**

. A payment form appears.

3 Fill in the payment details

(see field guide below).

4 Click **Record Payment**

. The invoice status updates automatically: partial payment → **Partially Settled**; full payment → **Settled**.

PAYMENT FORM FIELDS	
Payment Date *	The date the money was received. Usually today's date.
Amount *	How much was received. Cannot exceed the remaining balance.
Payment Method *	How payment was made: Cash, Bank Transfer, Check, Card, Mobile Banking, or Other.
Account *	Which bank or cash account the money was deposited into. Select from your active accounts.
Reference	Optional — transaction ID, cheque number, or any external reference for reconciliation.
Notes	Any additional notes about this payment.

PARTIAL PAYMENTS

You can record multiple partial payments against the same invoice. Each payment is stored separately with its own date and method. The invoice status will be **Partially Settled** until the balance reaches zero.

Adding Charges & Discounts to an Invoice

Open an invoice by clicking **View**, then use the buttons in the top-right of the invoice detail page.

Record Charge

Use this to add an extra cost associated with the invoice — for example, a delivery fee, courier charge, or return handling fee.

Effect: Creates an expense entry in your books. Does *not* increase the invoice amount owed by the customer.

Examples: Courier charge (6310), Shipping (6320), Local Delivery (6330), Return Charge (6340)

Record Discount

Use this to apply a discount or credit to the invoice — for example, a loyalty discount or goodwill adjustment.

Effect: Reduces the amount the customer owes. The outstanding balance is updated immediately.

Guard: The total of payments plus discounts cannot exceed the original invoice total.

Invoice Detail Page

Click **View** on any invoice to open its detail page. Here you will see:

- **Invoice summary card** — customer name, dates, currency, and status badge
- **Totals card** — subtotal, tax, discount, total, amount paid, and remaining balance
- **Line Items table** — the individual products/services with quantities and prices
- **Payments panel** — every payment recorded, with date, method, and amount
- **Journal Entries panel** — the accounting transactions automatically created when the invoice was posted and when payments were received

6

Bills (Vendor Invoices)

Recording and paying invoices received from your suppliers

Accounting → Bills

A Bill is a purchase invoice you receive from a supplier. When you record a bill, the system tracks what you owe and creates the matching accounting entries when approved.

Bill Lifecycle

Creating a New Bill

- 1 Click **New Bill**.
.
- 2 **Select the Vendor**
from the dropdown. Add the vendor first if they are not listed.
- 3 **Set the Bill Date and Due Date.**
- 4 **Enter the Bill Reference**
— the supplier's own invoice number (so you can match it to the paper/PDF invoice you received).
- 5 **Add line items**
— each purchased product or service with Quantity, Unit Price, and Tax %.
- 6 Click **Save**.
. The bill is saved as **Draft**.

Approving a Bill

Approving a bill records it in your accounting ledger. Your Accounts Payable balance will increase by the bill total.

- 1 **Find the bill**
in the list — status **Draft**.
- 2 Click **Approve**
and confirm. Status changes to **Approved**.

Paying a Bill

- 1 **Find an Approved or Partial bill**
.

2

Click **Pay**

. Fill in the payment form.

3

Click **Record Payment**

. The system records a journal entry reducing your Accounts Payable.

BILL PAYMENT FORM FIELDS

Payment Date *	The date you paid the vendor
Amount *	Amount paid. Can be less than the total (partial payment)
Payment Method *	Cash, Bank Transfer, Check, Card, Mobile Banking, or Other
Account *	Which bank or cash account the payment came from
Reference	Your transaction reference, cheque number, or bank transfer ID

Bill Charges & Discounts

Open a bill by clicking **View**, then use the action buttons:

- **Record Charge** — add a freight, shipping, or handling cost associated with the purchase. This records an expense but does not change what you owe to the vendor.
- **Record Discount** — apply a vendor discount or rebate, which reduces the outstanding AP balance.

7

Expenses

Recording and tracking all company spending

Accounting → Expenses

Use Expenses to record any company spending that is not tied to a specific vendor bill — for example, office supplies, utility payments, staff travel reimbursements, or software subscriptions.

Creating a New Expense

- 1

Click

New Expense

.
- 2

Fill in the expense details

using the form below.
- 3

Choose the Payment Method

— this determines what happens when you post the expense.
- 4

Click

Save

. Status is

Draft

 .
- | EXPENSE FORM FIELDS | |
|---------------------|--|
| Expense Date * | The date the cost was incurred |
| Account * | Which expense account to record this against (e.g. Office Supplies, Travel, Utilities) |
| Subtotal * | Amount before tax |
| Tax Amount | VAT or tax on the expense, if applicable |
| Total * | Total amount including tax |
| Payment Method * | Cash = paid immediately when posted (status → Paid). Credit = to be paid later (status → Approved, then pay separately). |
| Vendor Name | Optional — who you paid (e.g. "Grameen Phone", "Office Depot") |
| Description | What this expense was for |
| Line Items | Optional — break the expense into individual items for detail |
- Posting an Expense
- Click

Post

 next to a Draft expense to record it in the ledger.
- If payment method is **Cash**: recorded as paid immediately. Status →

Paid

 .
- file:///home/octopus/lab/laravel_plugins/laravel-accounting/docs/laravel-accounting-user-guide.html
- 15/28

- If payment method is **Credit**: recorded as a payable. Status → **Approved** . Click **Pay** later when you settle it.

TIP

Use **Cash** for expenses you paid out of pocket right away (e.g. buying office stationery with petty cash). Use **Credit** for expenses on a company credit card or that you will settle at month-end.

8

Budgets

Planning expenditure and tracking actuals against your plan

Accounting → Budgets

Budgets let you set spending targets for specific expense accounts over a time period. Once approved, the system compares actual spending against your budget and shows you the variance.

Creating a New Budget

1

Click

New Budget

.

2

Give the budget a name

— e.g. "Q1 2026 Operating Budget".

3

Set the Period

— the start and end dates this budget covers.

4

Add budget lines

— one line per account (e.g. Rent, Utilities, Salaries). For each line set the account and the budgeted amount for the period.

5

Click

Save

. Status is

Draft

.

Approving a Budget

A budget must be approved before it is used in variance reporting. Find the Draft budget and click **Approve**. Once approved, the budget cannot be deleted — create a new revised budget instead.

Viewing Budget vs Actual

Click **View** on any approved budget to open the variance report. For each budget line you will see:

Column	What It Shows
Account	The expense account this line covers
Budgeted	The amount you planned to spend
Actual	How much has actually been spent (based on posted transactions)
Variance	The difference (positive = under budget, negative = over budget)
Variance %	The percentage over or under

NOTE

Actual figures only include **posted** transactions within the budget's date range. Draft expenses and unposted journal entries are not counted.

9

Financial Reports

Generating and understanding your financial statements

Accounting → Financial Reports

The Financial Reports page lets you generate four standard accounting reports for any date range. All reports only include **posted** transactions.

How to Generate a Report

1

Select the Report Type

from the dropdown (see options below).

2

Set the Start Date and End Date

for the reporting period.

3

SBU Code (optional)

— leave blank to include all business units, or type a code (e.g. DHAKA) to filter to one unit.

4

Click **Generate**

. The report appears below.

5

Click **Export PDF**

to download the report as a PDF file.

Trial Balance

A Trial Balance lists every account with its total debits and credits for the selected period. It is used to verify that the books are in balance — total debits must equal total credits.

Use it to: spot unusual account activity, verify period-end balances before closing, or prepare for an audit.

Balance Sheet

The Balance Sheet shows the financial position of your company **at a single point in time** (the End Date you select). It is divided into three sections:

Section	What It Includes
Assets	What the company owns — cash, bank balances, money owed by customers (AR), inventory
Liabilities	What the company owes — vendor bills (AP), taxes payable, loans
Equity	The owners' stake — share capital plus retained earnings

Assets = Liabilities + Equity — if these don't balance, there is an error in the books.

Income Statement (Profit & Loss)

The Income Statement shows how much money the company made and spent over a **date range**. It tells you whether the business was profitable in that period.

Section	What It Includes
Revenue	All income earned (sales revenue)
Expenses	All costs incurred (COGS, operating expenses, interest)
Gross Profit	Revenue minus Cost of Goods Sold
Net Income	Revenue minus all expenses — the bottom line. Positive = profit; negative = loss.

Cash Flow Statement

The Cash Flow Statement shows where cash came from and where it went during the period. It is divided into three activities:

Activity	What It Tracks
Operating	Cash from day-to-day business operations (collecting payments, paying suppliers)
Investing	Cash spent on or received from long-term assets (equipment, property)
Financing	Cash from borrowing or repaying loans, or from investors

The **Net Change** at the bottom shows whether your cash position improved or declined.

WHICH REPORT TO USE?

- Check if books are balanced → **Trial Balance**
- Check what the company owns and owes right now → **Balance Sheet**
- Check if the company made a profit → **Income Statement**
- Check if cash is healthy despite showing a profit → **Cash Flow**

10 General Ledger

Viewing every transaction posted to any account

Accounting → General Ledger

The General Ledger is the complete record of every financial transaction in the system. For any account you select, you can see each individual debit and credit entry, the date, the source document, and the running balance.

How to Use the General Ledger

1 Select an account

from the account picker, or leave it blank to view all accounts.

2 Set the date range

using Start Date and End Date.

3 Click Generate.

You will see each transaction line with: date, journal entry number, description, debit amount, credit amount, and running balance.

Key figures shown per account:

Figure	Meaning
Opening Balance	The account balance at the start of the selected period
Period Debits	Total debits during the period
Period Credits	Total credits during the period
Closing Balance	The account balance at the end of the selected period
Running Balance	The account balance after each individual transaction

COMMON USE

Use the General Ledger to investigate a specific account — for example, to see all cash movements, or to verify why your Accounts Receivable balance is what it is.

11 Journal Entries

For accountants: manually recording double-entry transactions

Accounting → Journal Entries

ACCOUNTANTS ONLY

Journal entries are for trained accountants who need to manually record transactions that don't fit the standard invoice/bill/expense workflow (e.g. depreciation, opening balances, adjustments, accruals).

Journal Entry Concepts

Every journal entry must follow the **double-entry rule**: the total of all debit lines must exactly equal the total of all credit lines. The system will not allow you to save an unbalanced entry.

Debit

Increases an **asset** or **expense** account.
Decreases a **liability**, **equity**, or **revenue** account.

Example: recording cash received → debit Cash

Credit

Increases a **liability**, **equity**, or **revenue** account.
Decreases an **asset** or **expense** account.

Example: recording sales income → credit Revenue

Creating a Journal Entry

1 Click **New Entry**

2 Set the Entry Date, Type, Reference, and Description.

3 Add debit and credit lines

— for each line select the account, choose Debit or Credit, and enter the amount. Add as many lines as needed.

4 Check the balance.

The running debit and credit totals are shown. They must be equal.

5 Click **Save**

— saved as Draft. Then click **Post** to record it in the ledger.

JOURNAL ENTRY FIELDS	
Entry Date *	The accounting date for this transaction
Type	General (default), Closing (fiscal year close), or Adjustment
Reference	Optional external document reference
Description	Explanation of what this entry records
Currency	Currency of the amounts. All amounts are stored in base currency.

Approval Workflow

Depending on your organisation's settings, journal entries may require approval before posting:

A reviewer can also **Return to Draft** with a note if corrections are needed.

Voiding a Journal Entry

To cancel a posted journal entry, click **Void**. This marks the entry as void and removes it from reports. It does *not* automatically create a reversing entry — if needed, create a new journal entry with the lines reversed.

12

Chart of Accounts

Managing the list of financial accounts

Accounting → Chart of Accounts

ACCOUNTANTS ONLY

Changes to the Chart of Accounts affect all financial reports. Only make changes with guidance from your accountant or finance manager.

The Chart of Accounts is the master list of every account used to categorise financial transactions. Each account has a code number, a name, and a type.

Account Types

Type	Examples	Normal Balance
Asset	Cash (1000), Bank (1100), Accounts Receivable (1200), Inventory (1300)	Debit
Liability	Accounts Payable (2000), Tax Payable (2300), Loans	Credit
Equity	Retained Earnings (3100), Share Capital	Credit
Revenue	Sales Revenue (4000)	Credit
Expense	COGS (5000), Rent, Salaries, Interest Expense (6710)	Debit

DO NOT DEACTIVATE SYSTEM ACCOUNTS

The accounts used for automatic journal entries (Cash 1000, AR 1200, AP 2000, etc.) must remain active. Deactivating them will prevent invoices, bills, and payments from being posted.

13 Period Closing

Locking a completed month to prevent further changes

Accounting → Period Close

IRREVERSIBLE ACTION

Closing a period is permanent. Once a period is closed, no transactions can be posted to dates within that period. Only perform this action at month-end after all transactions have been reviewed and approved.

Closing a period takes a snapshot of all account balances and locks the period. This ensures historical figures cannot be altered after the month has been reported.

Step-by-Step Period Close Process

1 Navigate to Period Close

and select the period to close from the dropdown (e.g. "March 2026").

2 Click **Run Pre-Close Checks**

. The system checks for any issues that must be resolved before closing.

3 Review the check results:

- **Unposted Journal Entries**
— shown in red. These *must* be posted or deleted before closing.
- **Open Invoices**
— shown in yellow. These are warnings only; you can close the period with open invoices.
- **Open Bills**
— shown in yellow. Same as above — warnings only.

4 Resolve all blockers

(red items). Go to Journal Entries and post or delete any unposted entries within the period.

5 Inventory Snapshot (optional)

— if the Inventory System is connected, tick the checkbox to also snapshot inventory quantities and WAC values at period-end.

6 Click **Close Period**

and confirm. The period is now locked. A ✓ marker appears next to it in the dropdown.

After Closing

- All account balances are snapshotted in the database for historical reporting.
- Any attempt to post a transaction dated within the closed period will be rejected by the system.

- You can still *view* all transactions from the closed period — they are not deleted.
- If you need to make a correction to a closed period, contact your system administrator to discuss options.

14 Frequently Asked Questions

Common questions and how to handle them

I created an invoice with the wrong amount. What do I do?

If the invoice is still in **Draft** status, you can edit it. If it has already been **Posted**, you must void it and create a new one. Go to the invoice detail page, scroll down to find a **Void** option (available to accountants), or ask your accountant to void it for you.

I recorded a payment twice by mistake. What should I do?

Contact your accountant. The system prevents exact duplicate payments (same amount, same date, same method), but if two slightly different entries were made, the accountant can investigate through the audit trail and journal entries and post a correcting entry.

An invoice shows "Overdue" but the customer has already paid. Why?

The payment has not been recorded in the system yet. Find the invoice and click **Record Payment** to enter the payment details. Once saved, the status will update to **Settled**.

I can't find a customer in the dropdown when creating an invoice.

The customer must be added to the system first. Go to **Accounting** → **Customers**, click **New Customer**, fill in their details, and save. They will then appear in the invoice form.

Can I export reports to Excel?

Reports can be exported to PDF using the **Export PDF** button. For Excel/CSV export, ask your system administrator — this may be available depending on your configuration.

What is the difference between a Bill and an Expense?

	Bill	Expense
Purpose	A formal vendor invoice you receive	Any company cost not tied to a vendor invoice
Vendor	Must select a registered vendor	Vendor is optional (free-text name)
Accounting	Increases Accounts Payable	Reduces Cash (cash) or increases AP (credit)
Examples	Supplier invoice for goods purchased	Office supplies, travel, utility bills

How do I see the history of changes to a record?

Every record has an **audit trail**. Click the clock icon  next to any invoice, bill, expense, or budget to see every change that was made — who made it, what changed, and when.

What does "SBU Code" mean on the Reports page?

SBU stands for **Strategic Business Unit**. If your organisation tracks transactions by location or department (e.g. DHAKA branch, CHITTAGONG branch), you can filter reports to one unit by typing its code. Leave it blank to see figures for the whole company.

The dashboard shows a different figure than the Income Statement. Why?

Check the date ranges. The dashboard uses the period selected in its dropdown (e.g. This Month), while the Income Statement uses the Start Date and End Date you enter manually. Make sure both cover the same period to compare figures.

Accounting System — User Guide · For questions, contact your Finance Manager or System Administrator

June 2026 · Internal Use Only
